THEORY OF MICROWAVE PHASE AND AMPLITUDE
COMPARISON (MONOPULSE RADAR). [1960] 36p.
Order from SLA mi\$3.00, ph\$6.30 61-10455

Trans. of Annales de Radioélectrique (France) 1958,
v. 13, Apr, p. 130-139.

Having briefly recalled the general principles of operation of radars using the comparison of phases or amplitudes of signals received, the author sets out the formulae giving the values of the sum and difference of these signals. The value of the quotient of the difference by the sum is then determined as a function of the antenna pattern, the quotient being zero on the antenna axis. The variation of the direction of this axis is then examined as a function of the unbalanced conditions in the circuits shaping the sum and difference signals and conclusions are drawn in respect to the structure and position of these circuits. A detailed study of the properties of Ta_2O_5 produced by
anodic oxidation of tantalum was made. It could be
shown that the valve effect is mainly due to the presence
of defective areas, probably pores, in the oxide. These
pores can be localized by electrolytic deposition of
silver or by the electrolytic removal of silver de-
posited by evaporation. Grazing evaporation makes it

L. Scarniet-Bolette, L.

Trans. of Ann[ales] Sci[entifiques] Text[iles] Belges.
1961 [v. 9] no. 3, p. 63-68.

DESCRIPTORS: *Fibers, Fibers (Synthetic).
Mechanical properties.

A description is given of an apparatus for the measurement of the specific volume of yarns. The results of some experiments performed on this apparatus are described: variation of specific volume with yarn number and twist. Comparison is made between specific volume of wool yarns and high bulk acrylic yarns.
